

Print Your Pallet Labels with GlobalLink Domestic TMS

by Danielle Leonard - Thursday, September 22, 2016

The GlobalLink Domestic Transportation Management System (TMS) offers a label printing feature. No

longer will you have to create your own label, this feature allows you to easily print 5×7” pallet labels with your shipping information right from our TMS.

To get to the labels, first you click *Loads* on the home screen.

Once you are here, select *Planned* and *In Transit* from the drop-down menu. This will populate a list of

your loads.

Then select the load you would like a pallet label for.

Go up to the *Actions...* drop down menu to get to *Admin* and then choose *Manage Documents*.

From here you can generate a label by choosing *Shipping Label* from the *Output Template* and then

clicking *Generate/Send*.

You will be able to print the label from the generated PDF. The label indicates the shipper and

consignee's name, address and the reference numbers associated with your load.
