

Consumer Product Safety Commission (CPSC) Version ID Agreement

Please carefully review this agreement to understand your obligations to report the proper identifier for your imports. Failure to provide the current applicable Version ID may delay release of your cargo.

CPSC Version IDs

A Version ID is one of three Certificate Identifiers required to be reported in your customs entry. It is defined as “a unique identifier for the specific version of product certificate in the [Product Registry](#).”

Changes to Version IDs

Any change to your Version ID requires notification to your broker. You must update the Version ID in your Product Registry whenever one of the following occurs:

- An existing product certificate requires an update based on factors such as testing compliance renewal
- A new batch of the same product (with the same Product ID) that has a [material change](#) when compared to the original product batch, such as
 - a change to the product design
 - a change to the manufacturing process
 - a change to the source of the component parts for the product
- A new batch of the same product (with the same Product ID) manufactured at different facilities and/or tested at different labs
- Edits to a certified product certificate are required after the editing grace period has ended
- A completed and certified product certificate requires edits but has already been used in a PGA Message Set within the editing grace period

The Version ID is the only Certificate Identifier that changes when an update is made to an existing product certificate.

Example: Importer ABC Co. entered their first product certificate for Product ID: A1234567 using Version ID: **V1**. They need to make an update to the certificate now that they have conducted annual retesting. In the Product Registry, they update the information using Version ID: **V2**.

Reporting Version IDs to Mohawk Global

Because Version IDs change frequently, Mohawk Global needs to be provided with the correct Version ID(s) pertaining to the exact product(s) on your shipment. Please use this form to indicate how you will inform Mohawk Global of the current Version ID on your import.

Version ID Agreement Form

I agree to provide Mohawk Global my Version IDs using the following method:

Version IDs will be listed on my commercial invoice in close proximity to, and clearly associated with, the item to which they pertain.

I will complete a CPSC Data Sheet on a per-shipment basis listing my Version IDs of each CPSC-regulated product on my shipment and attach the Data Sheet to my entry documents submitted to Mohawk Global for entry processing.

I will update my SOP with Mohawk Global to store Version IDs into my parts database. Mohawk Global will process Reference PGA message sets using the Version ID stored in the parts database. I acknowledge that I am responsible for providing Mohawk Global with updated Version IDs whenever a change is made in my CPSC Product Registry.

Other (please specify):

Agreement Signature

I _____ of
Name, Title

_____ agree to
Company Name

provide Mohawk Global my CPSC Version IDs in the manner specified above. The Version IDs provided to Mohawk Global will be true and correct, exactly as certified within my CPSC Product Registry. I understand that providing false, incomplete, or incorrect information may lead to shipment delays and/or enforcement action by CPSC and/or Customs and Border Protection (CBP).
